

**A RESOLUTION OF THE TOWN COUNCIL OF BASALT, COLORADO, IN SUPPORT OF A  
COMPREHENSIVE STATEWIDE ENERGY PLAN AND MITIGATION OF THE IMPACTS OF  
OIL AND GAS DEVELOPMENT**

**Town of Basalt, Colorado  
Resolution No. 03  
Series of 2007**

**Whereas**, Western Colorado and Garfield County holds significant oil, coal, and natural gas reserves that are currently at the center of extensive exploration, research, drilling, and pipeline construction; and,

**Whereas**, these natural resources represent a valuable economic opportunity to the oil and gas companies, associated businesses, and communities of the region; and,

**Whereas**, the supply of natural gas is limited and the technology for oil shale is still developing; and,

**Whereas**, there is tremendous pressure from national policy and fuel markets to develop these resources quickly; and,

**Whereas**, although the oil and gas industry is a welcome addition to our regional economy and community, the development of finite oil and gas resources have had and will continue to have profound fiscal, social, and environmental impacts on the health and welfare of the communities in our region; and.

**Whereas**, our region already has first-hand experience with the negative impacts of a “boom and bust” related to energy development in the early 1980s.

**NOW, THEREFORE, LET IS BE RESOLVED THAT:**

The Town of Basalt, Colorado supports policies at the local, state and federal levels to fully capture the benefits and mitigate the impacts from the extraction and development of oil, natural gas, and coal resources.

**Let it be further resolved**, that the Town of Basalt, Colorado supports the following actions and policy changes:

1. **Developing a long-term, comprehensive State Energy Plan** that considers the costs and benefits of non-renewable fossil fuel energy production to the benefit of citizens beyond a short-term production boom. Furthermore, a comprehensive state energy plan should would place equal importance and investment in the development of renewable energy (solar, wind, hydro, biofuels) production and energy efficiency programs.
2. **Increasing local input and mitigation power in the oil and gas review process** since the land use implications of oil and gas development can have significant impact on neighboring properties, county roads, demand for services, and the health and safety of county residents.

3. **Improving the balance of representatives on the Colorado Oil and Gas Conservation Commission (COGCC)** to include non-industry perspectives such as human services, environmental health, and local governments.
4. **Balancing the interests of surface and mineral owners** by increasing bonding requirements of oil and gas developers to better protect surface owners from and mitigate for surface disturbances from drilling and accessing drilling sites. The State should also create a process for resolving surface and mineral owner disputes.
5. **Establishing a County auditing program** to ensure that industry accurately reports production and pays the appropriate taxes (in contrast to real estate taxation, where the County Assessor informs a home owner what their home is worth and how much tax they must pay, the Oil & Gas industry informs the County Assessor what their product is worth and how much tax they will be paying the County.)
6. **Updating the Energy Impact Fund formula** so that a greater percentage of these funds go directly to impacted counties and communities.
7. **Increasing the limit of the Environmental Response Fund** above its current level so more funding is available to investigate, prevent, monitor, and mitigate conditions that cause, or threaten to cause, significant adverse environmental impacts related to oil and gas operations rather than excess funding going into the State's General Fund.
8. **Adjusting the severance tax** (on oil, natural gas, and coal) and /or eliminating the property tax deduction for severance tax payments to better reflect that value of the severed resource, the impact to public infrastructure (roads, schools, water, air, public health) within the State of Colorado and local communities, and to prepare for the time when these non-renewable resources are exhausted. (The severance tax in Colorado ranges from 2 percent on gross income from mineral extraction of less than \$25,000 to a flat fee of \$10,750 plus 5 percent of gross income above \$300,000. Under current law, companies may deduct their property taxes from severance tax payments. As a result, the effective severance tax rate is 1.8 percent - the lowest among surrounding states. The severance tax rate in Wyoming and New Mexico is 6%.)
9. **Creating a Permanent Trust Fund** at the local and /or state, level to address the long term impacts of the oil and gas development. (For example, Wyoming, which has fewer students than Denver alone, has about \$1 billion in its trust fund for schools, while Colorado has \$300 million.)

RESOLVED this 13<sup>th</sup> day of February, 2007, by a vote of 7 to 0.

TOWN OF BASALT, COLORADO
